MONAD

Brand Guidelines.

V.02.01

Logo

Monad Logo

The Monad logo mark is a rounded diamond with a distinctive inner counter, creating a balanced, coin-like form that reflects simplicity and strength.

Our logo system is built around three lockups. The horizontal logo is our primary lockup and should be used in almost all cases, while the stacked logo is reserved for situations where vertical or square formats are required.

The logo mark may be used on its own when the full brand name is already present. This includes (but is not limited to) applications such as social media posts, long-form documents, web pages, and apps.

LIGHT MODE

LOGO MARK

HORIZONTAL LOGO

Monad Logo

When applied to dark surfaces, the Monad logos should always maintain strong visual contrast to ensure clarity and legibility.

In most cases, this means using the inverted logo set paired with our ■ Monad Dark Purple as the primary background color. This approach highlights the mark, preserves brand consistency, and ensures the logo remains instantly recognizable across digital and physical applications.

DARK MODE

LOGO MARK

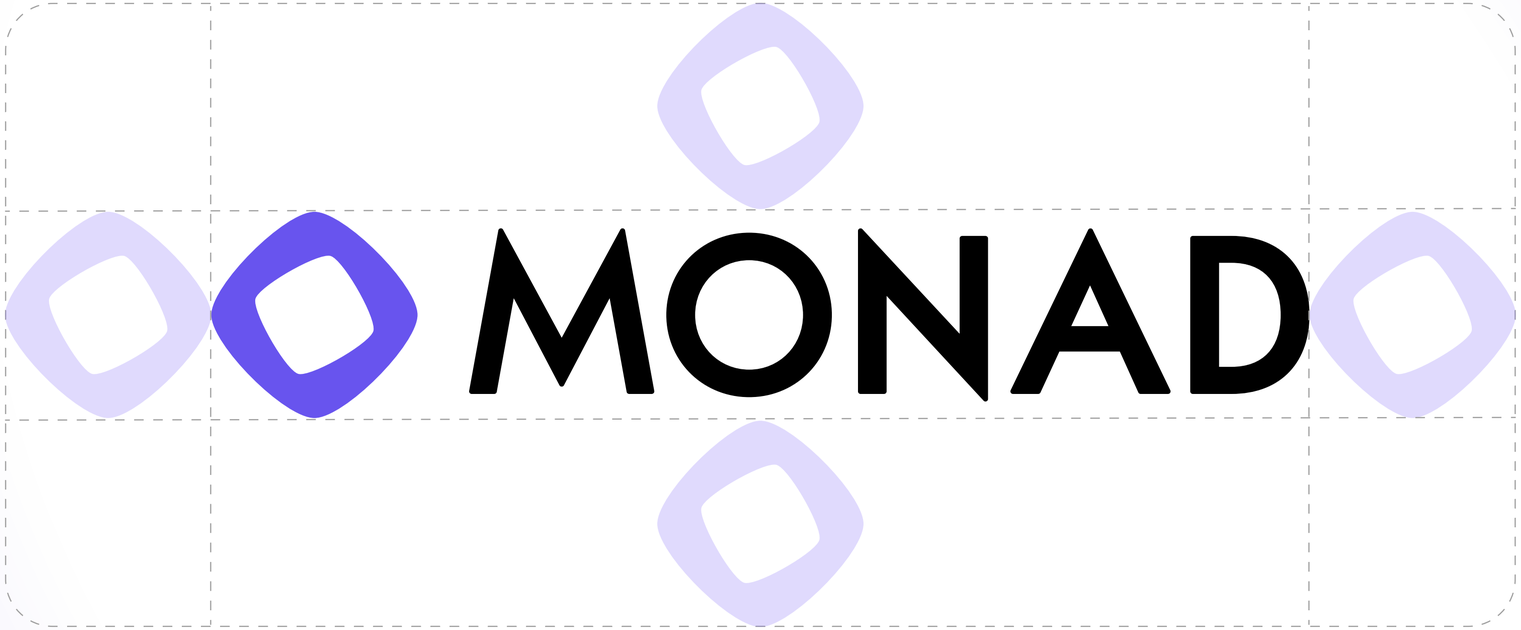
HORIZONTAL LOGO

Logo Spacing

To ensure our logo always remains clear and legible, we have defined an area of clear space around the logo that should be kept free of text and other elements.

This area is equivalent to the full height/ width of the Logo Mark. Note that this is the minimum clear-space required. Always use more when possible.

Do NOT alter the logo.



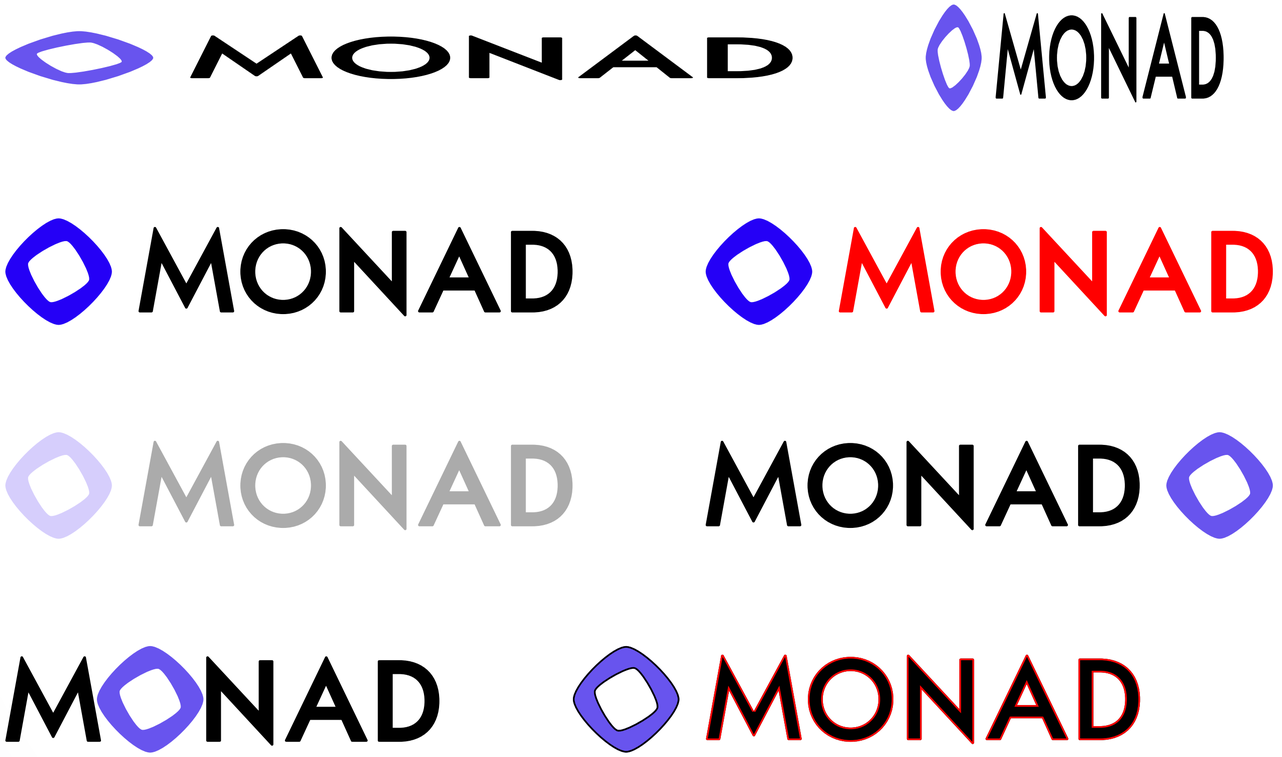
Logo
Dos & Dont’s

Dos & Dont’s

To protect the integrity of the Monad brand, the logo must always be used in its approved forms. Alterations or modifications are not permitted.

- Do Not stretch, skew, rotate, or distort the logo.
- Do Not use unapproved colors.
- Do Not reduce the opacity of the logo.
- Do Not separate or disassemble the logo elements.
- Do Not apply text effects, image effects, or filters.
- Do Not outline the logo.

By adhering to these standards, we ensure a consistent and recognizable brand presence across all applications.



Typography

Font Families

Family of typfaces

In our previous branding, we used the Monad coin shape as a visual device to represent portals.

Monad has an opportunity to use this portal shape to invite our audience to explore the Monad ecosystem.

Inter

We use **Inter** as our Secondary Typeface.

This font offers a wide range of styles and weights, giving us the flexibility to choose the perfect font for each design element.

Our typography prioritizes readability, ensuring that our content is easy to comprehend across various devices and platforms. Clear and legible fonts contribute to a smooth reading experience for our users.

Roboto Mono

Roboto Mono is a neutral mono font focused on creating a better reading experience.

This typeface should be used in all uppercase at all times. It's used for small numerical values, code, supplementary type, and SM Values for Monad Merchandise.

Color

Core & extended palette

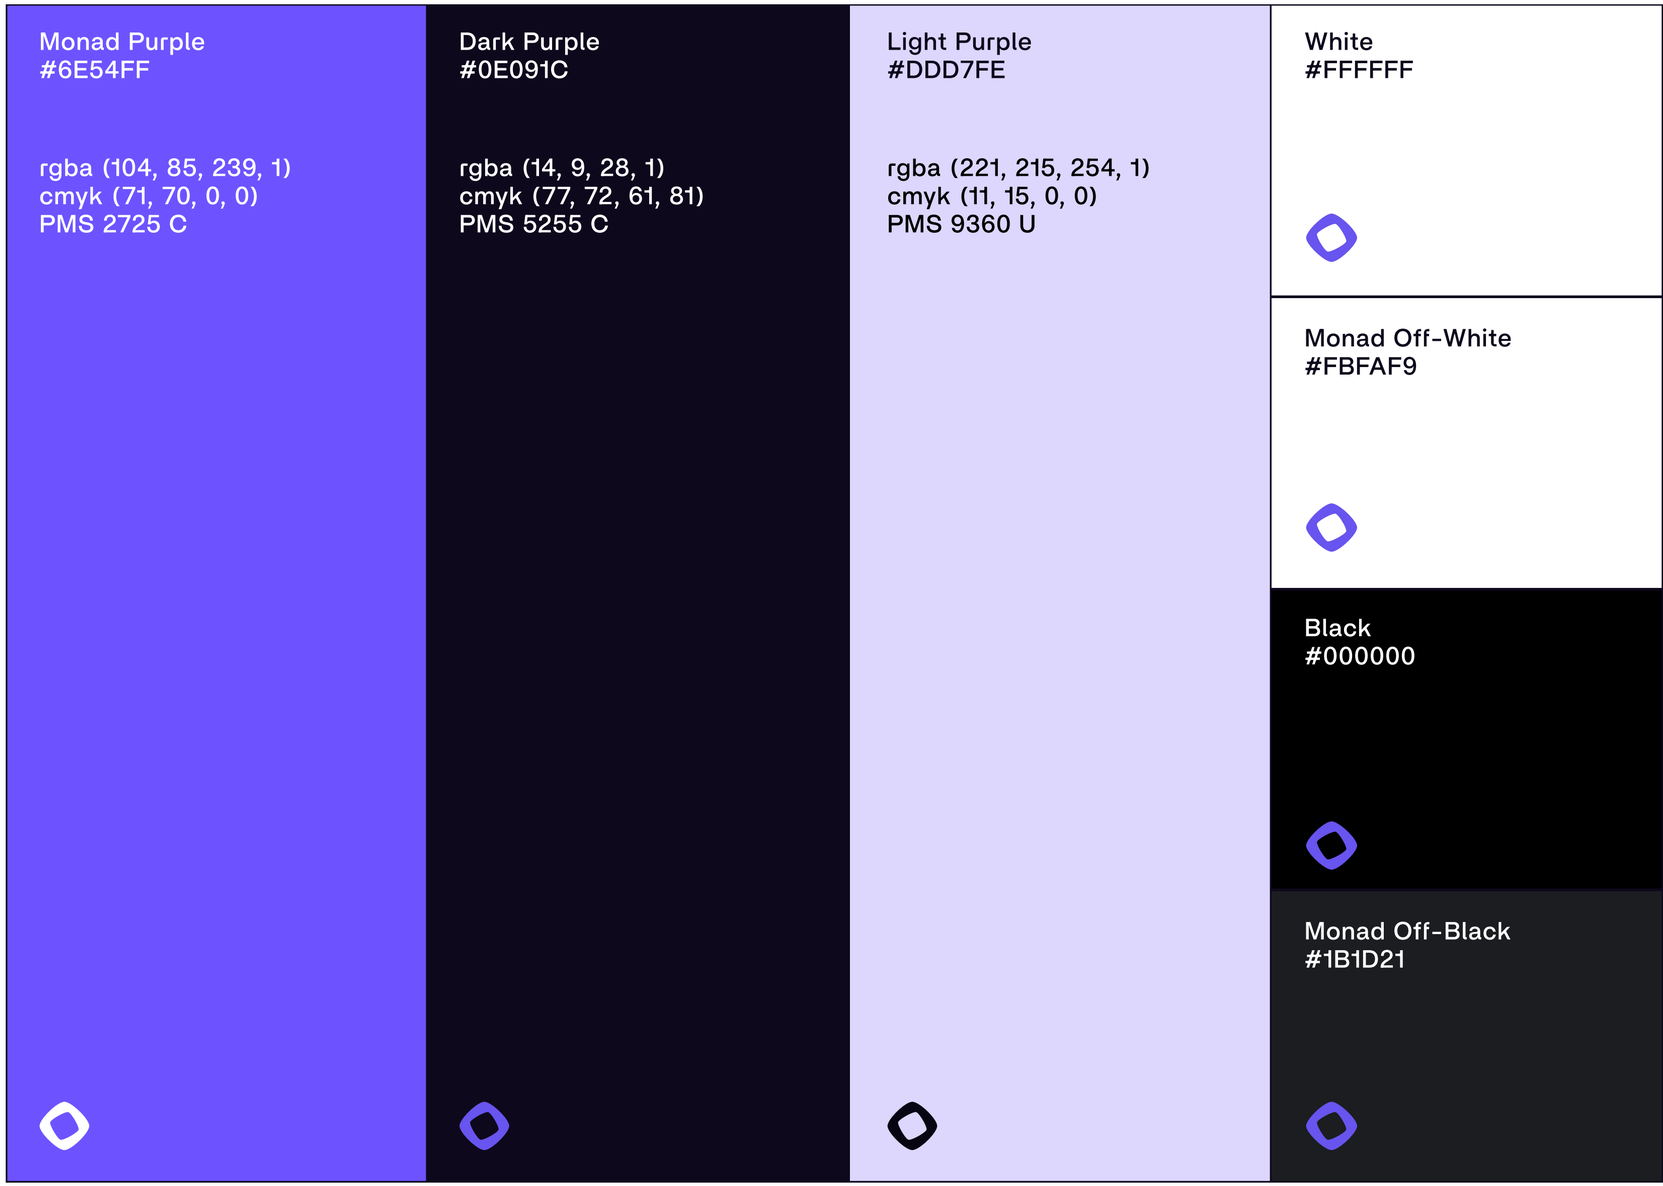
Core palette

Our color system is designed to be simple, modern, and intentional. Each color plays a specific role in reinforcing the Monad identity while maintaining clarity and consistency across applications.

Monad Purple is our core brand color and the most recognizable element of our visual system. This color should be the dominant accent in brand communications and is central to reinforcing recognition.

Where possible, use White or Monad Off-White for backgrounds for light mode.

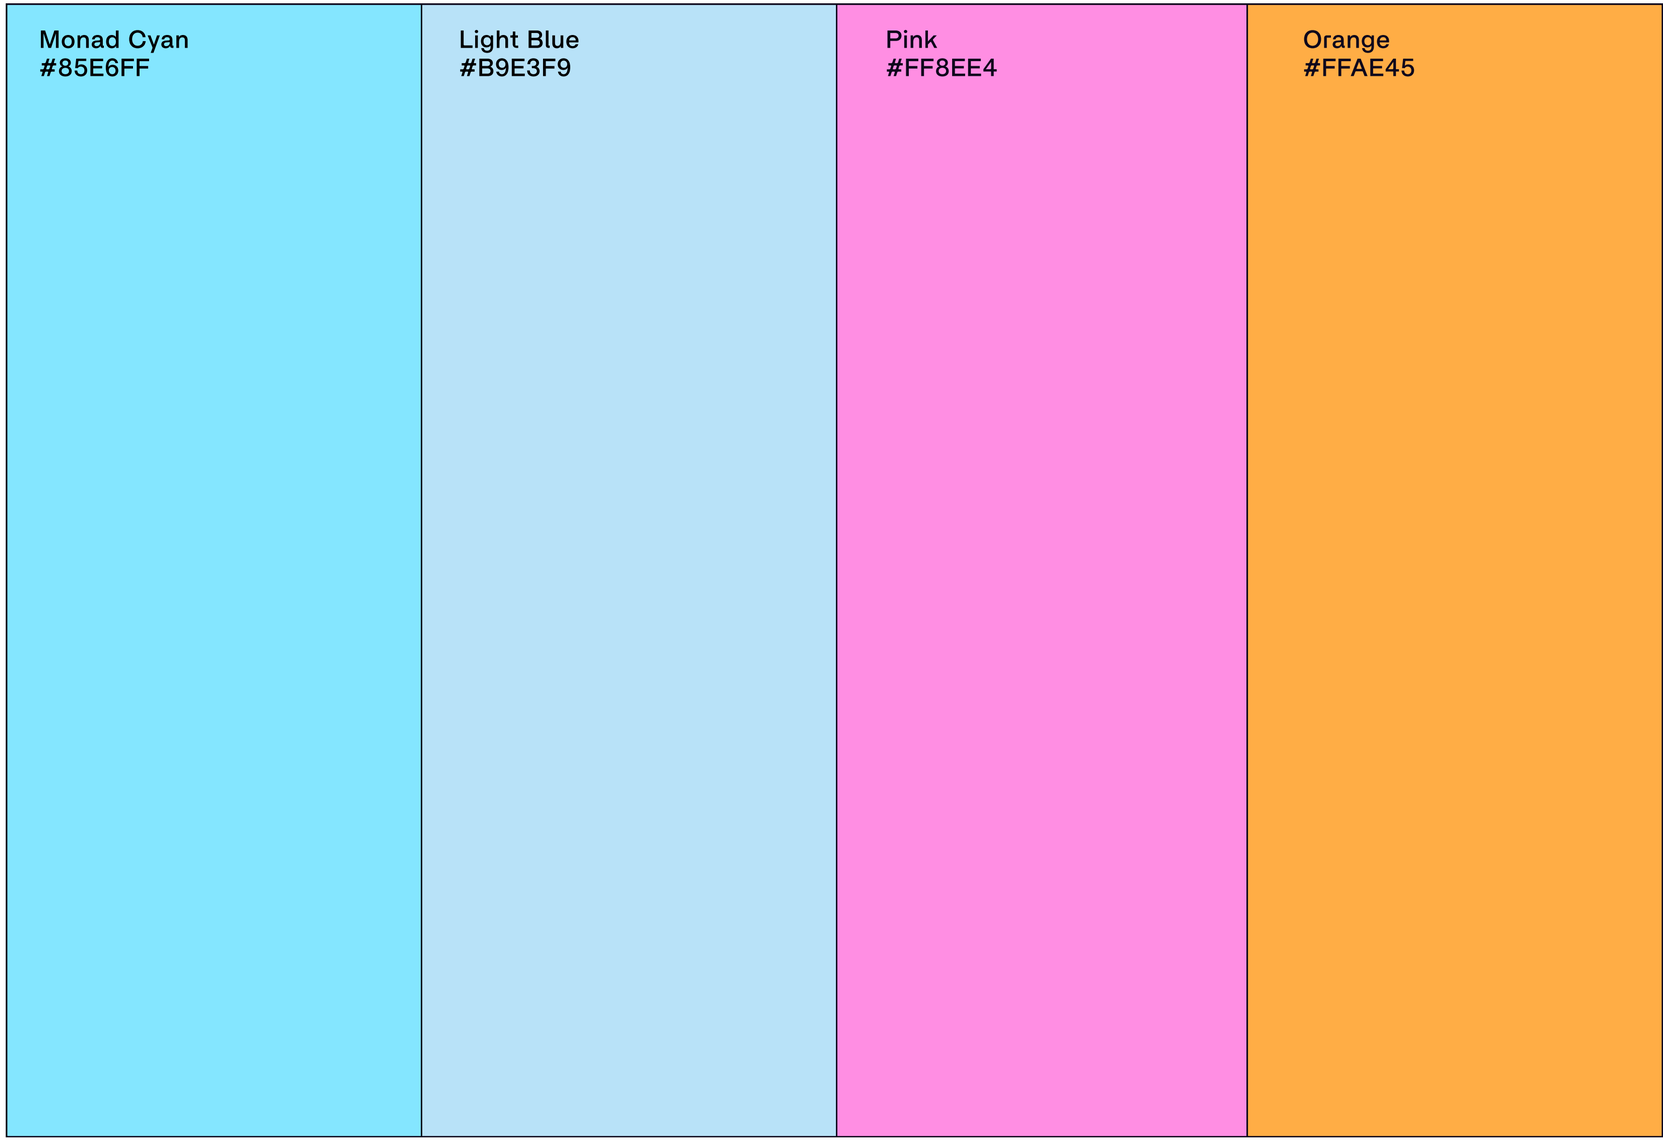
Light Purple should be used sparingly as an accent on light mode.



Secondary palette

Secondary colors bring extra vibrancy while keeping Monad Purple at the center. In every instance using our secondary colors, Monad Purple is always the dominant color. Supporting hues are carefully chosen to complement, not compete. Their role is to add energy, not to replace our core brand look.

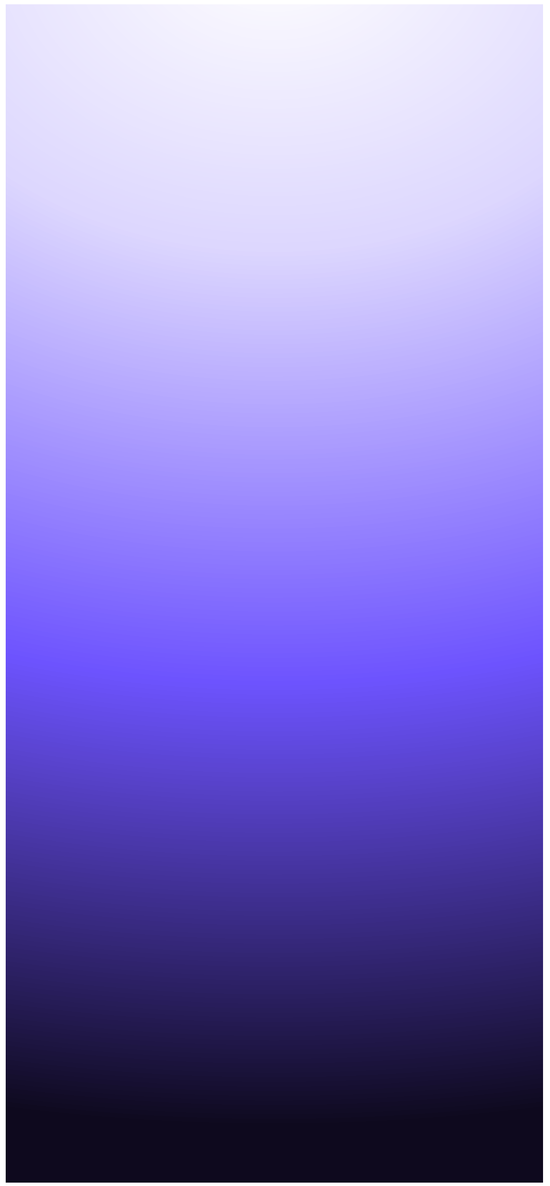
These colors should not flood entire visuals or replace our primary palette. Instead, they are reserved for select creative applications where additional vibrancy is needed to elevate impact.

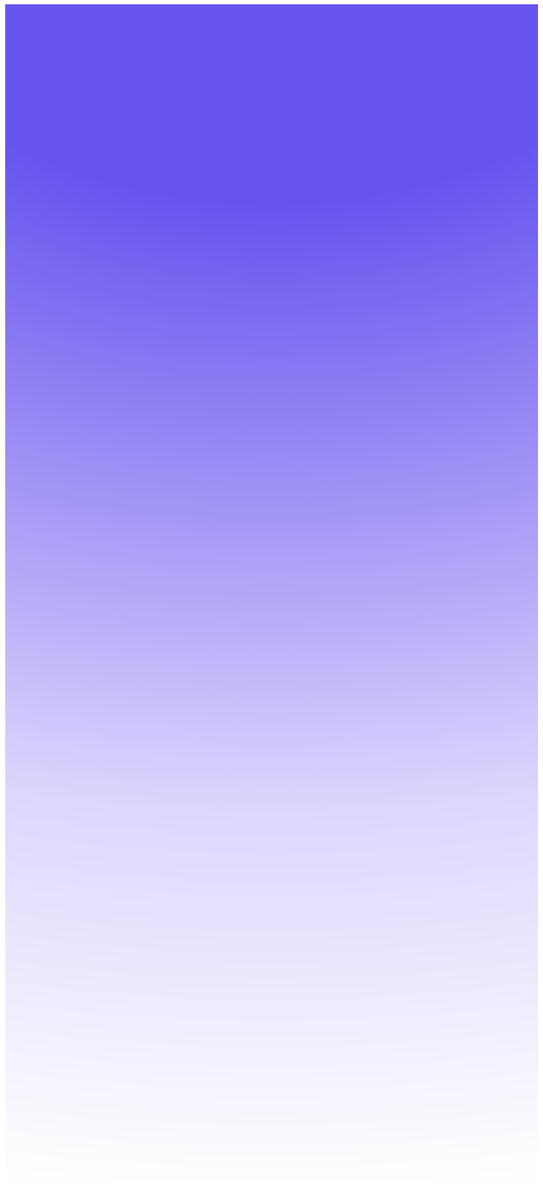


Primary Gradients

Monad gradients are built exclusively from our core brand colors. They extend the Monad color palette, adding depth, energy, and dimensionality to our brand.

Gradients should be applied sparingly and with purpose, always supporting the content rather than overpowering it. They work best at large scales (e.g., backgrounds, section dividers, hero images).





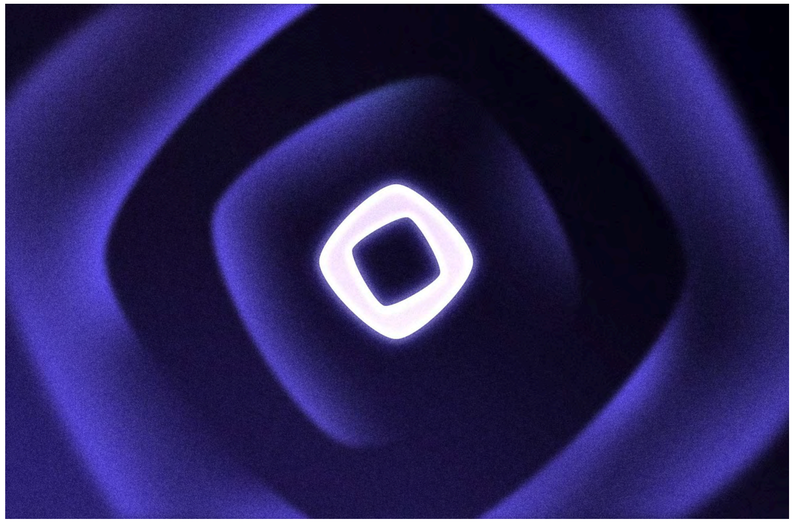
Brand Expressions

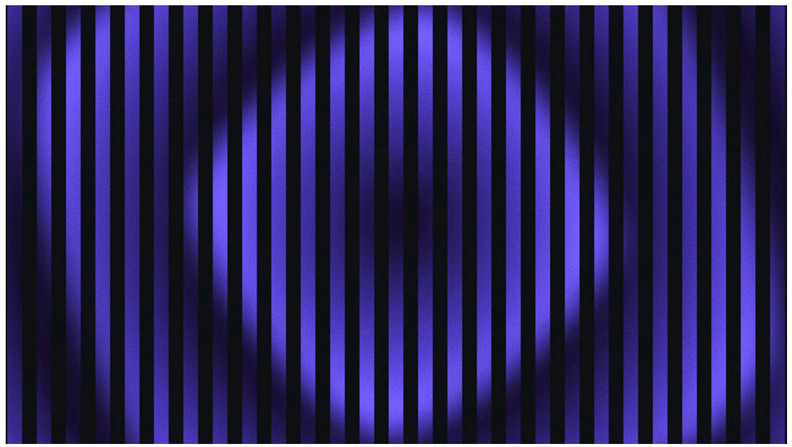
Portals

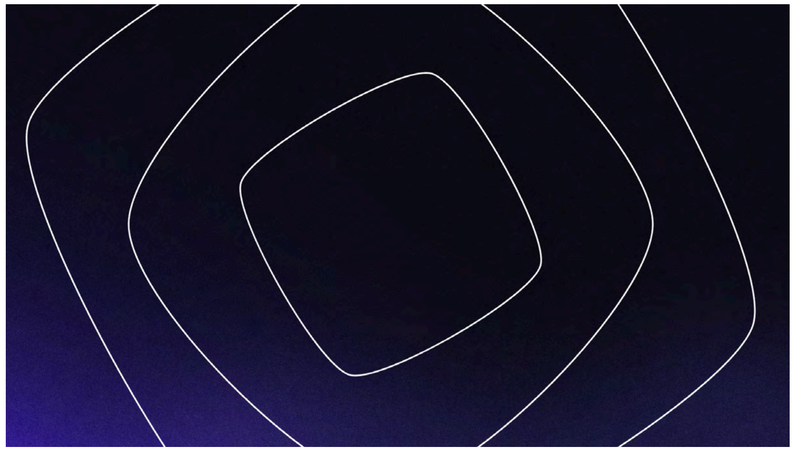
Portals

In our previous branding, we used the Monad coin shape as a visual device to represent portals.

Monad has an opportunity to use this portal shape to invite our audience to explore the Monad ecosystem.





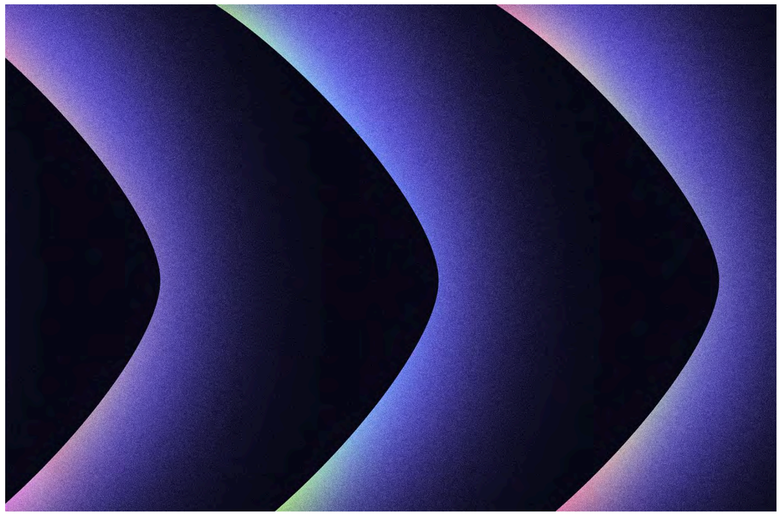


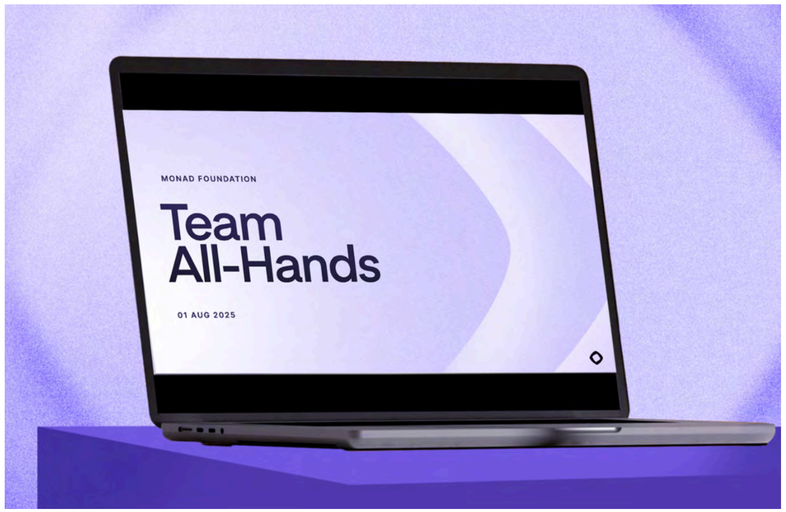
Direction

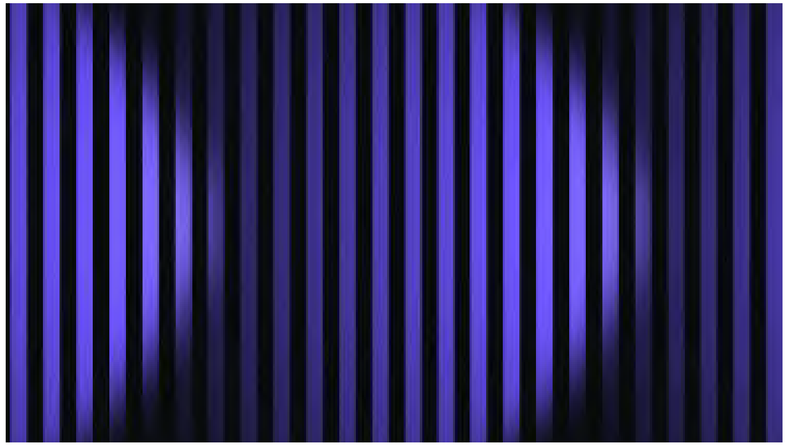
Direction

In reimagining the visual language of Monad, it was important to distill not just what the brand stands for, but what it feels like.

Looking inward to the geometry of Monad's own form exists a directional curve. These speed boost lines function as visual accelerators, implying propulsion, directionality, and focus.



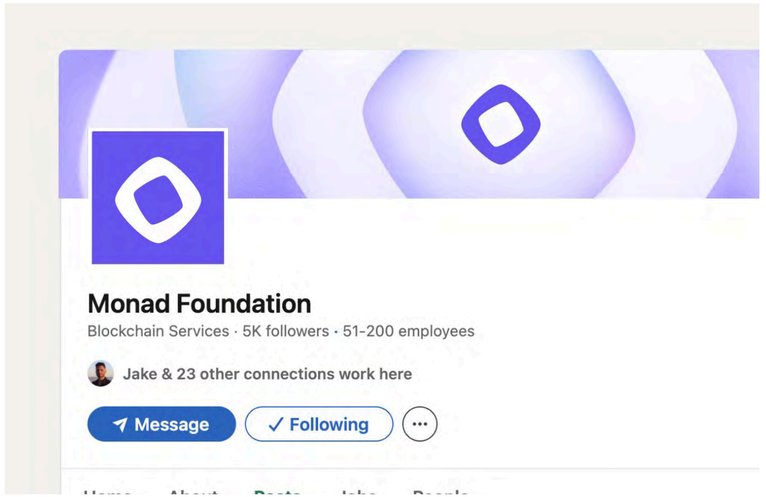


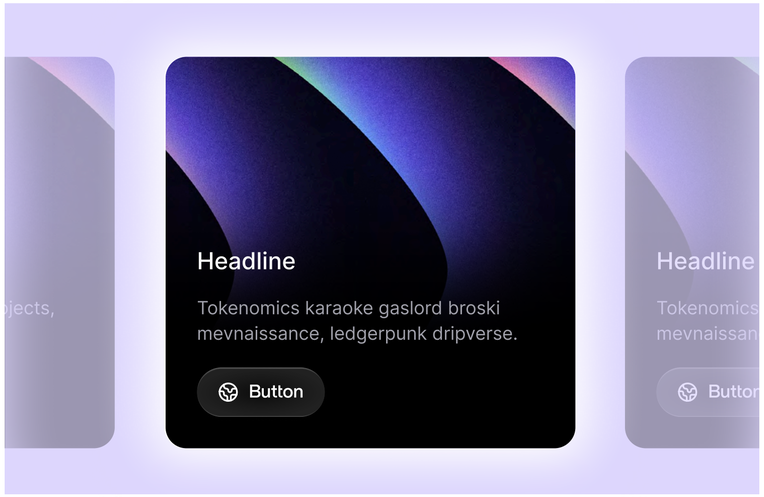


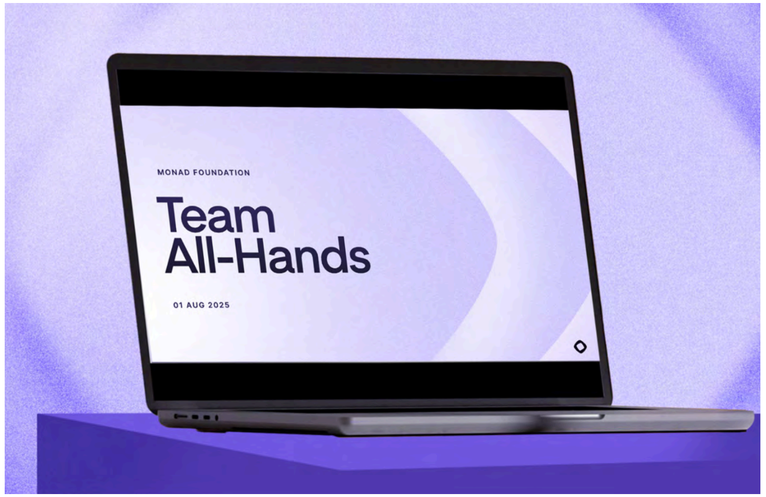
Brand expressions in action

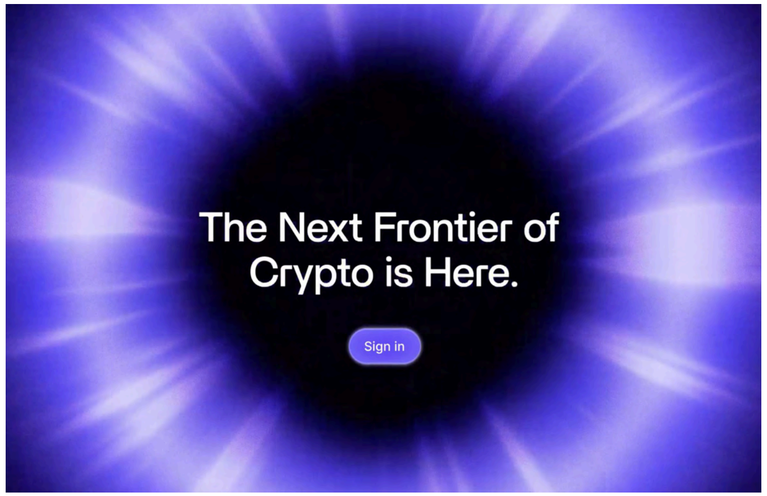
Brand Expressions in Use

Our portal visuals and directional linework combine to create a distinctive brand language. Together, they bring consistency across mediums while allowing flexibility in expression, ensuring Monad feels unified and recognizable in every context.









Texture

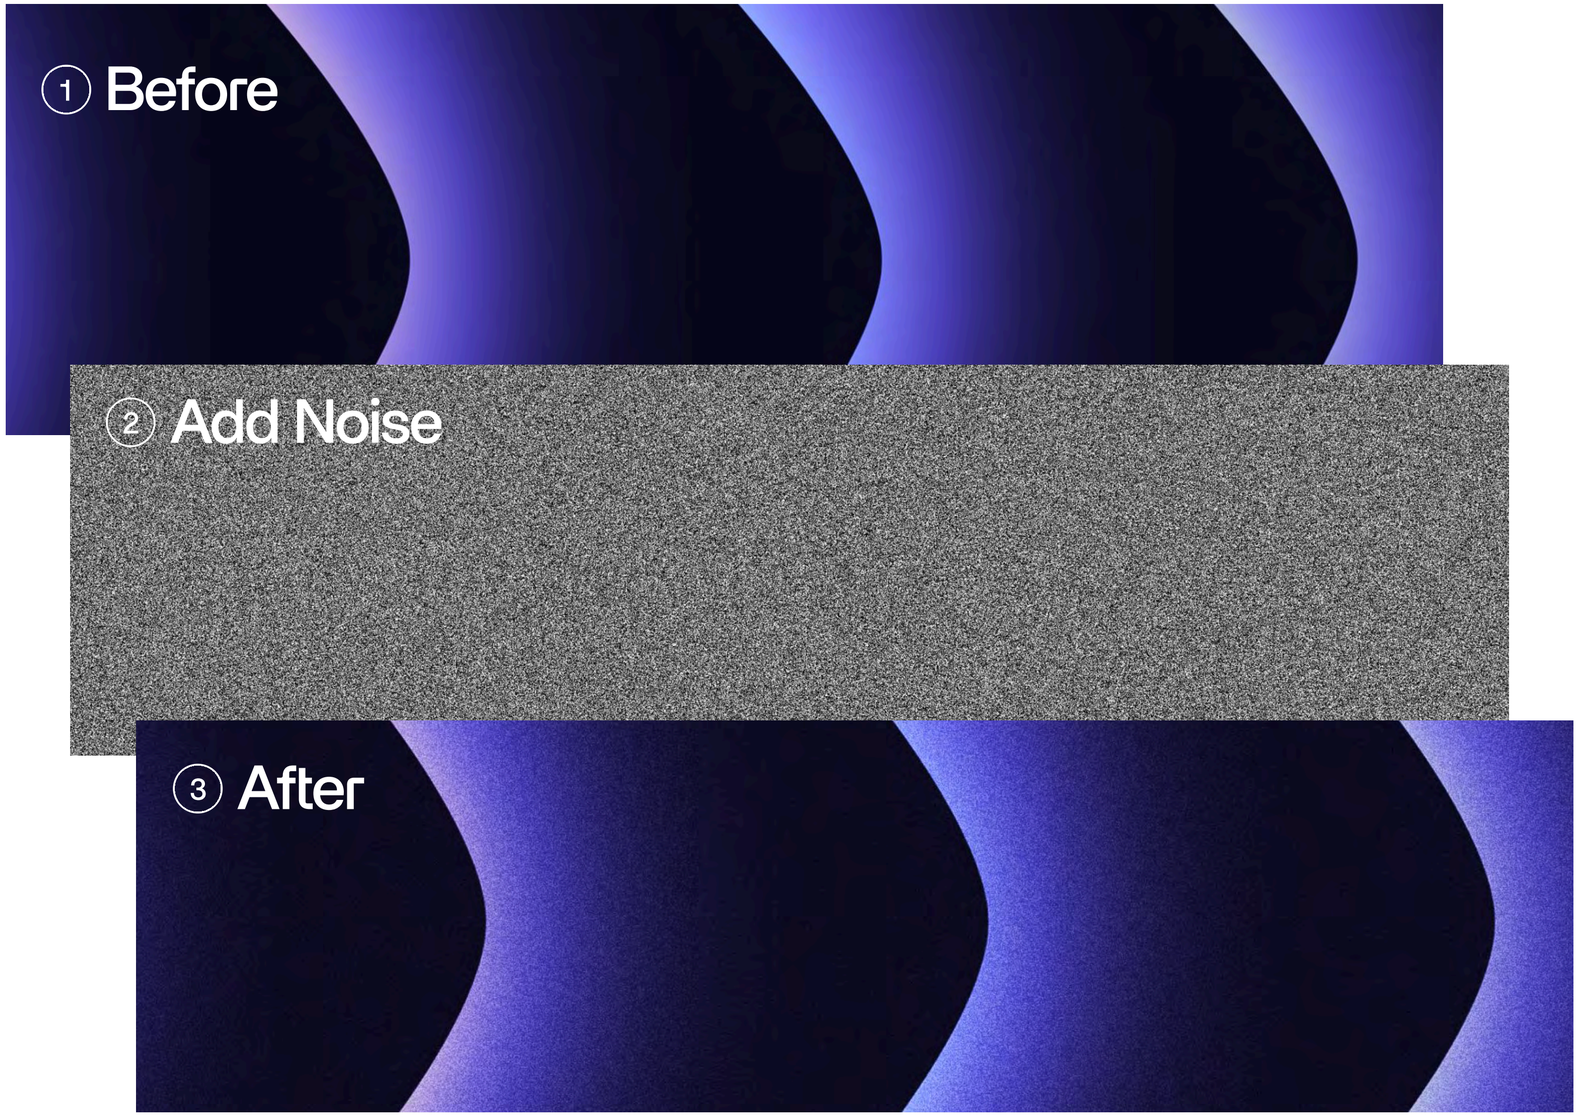
Noise

Noise

When using gradients or blurs, using a subtle noise texture can help soften the image while also giving it some grit.

To recreate this Noise:

- Create a Noise Duotone Noise layer at above your image layer
- Set the Blend Mode to Soft Light or Overlay.
- Set the Opacity to 20% or to your liking.

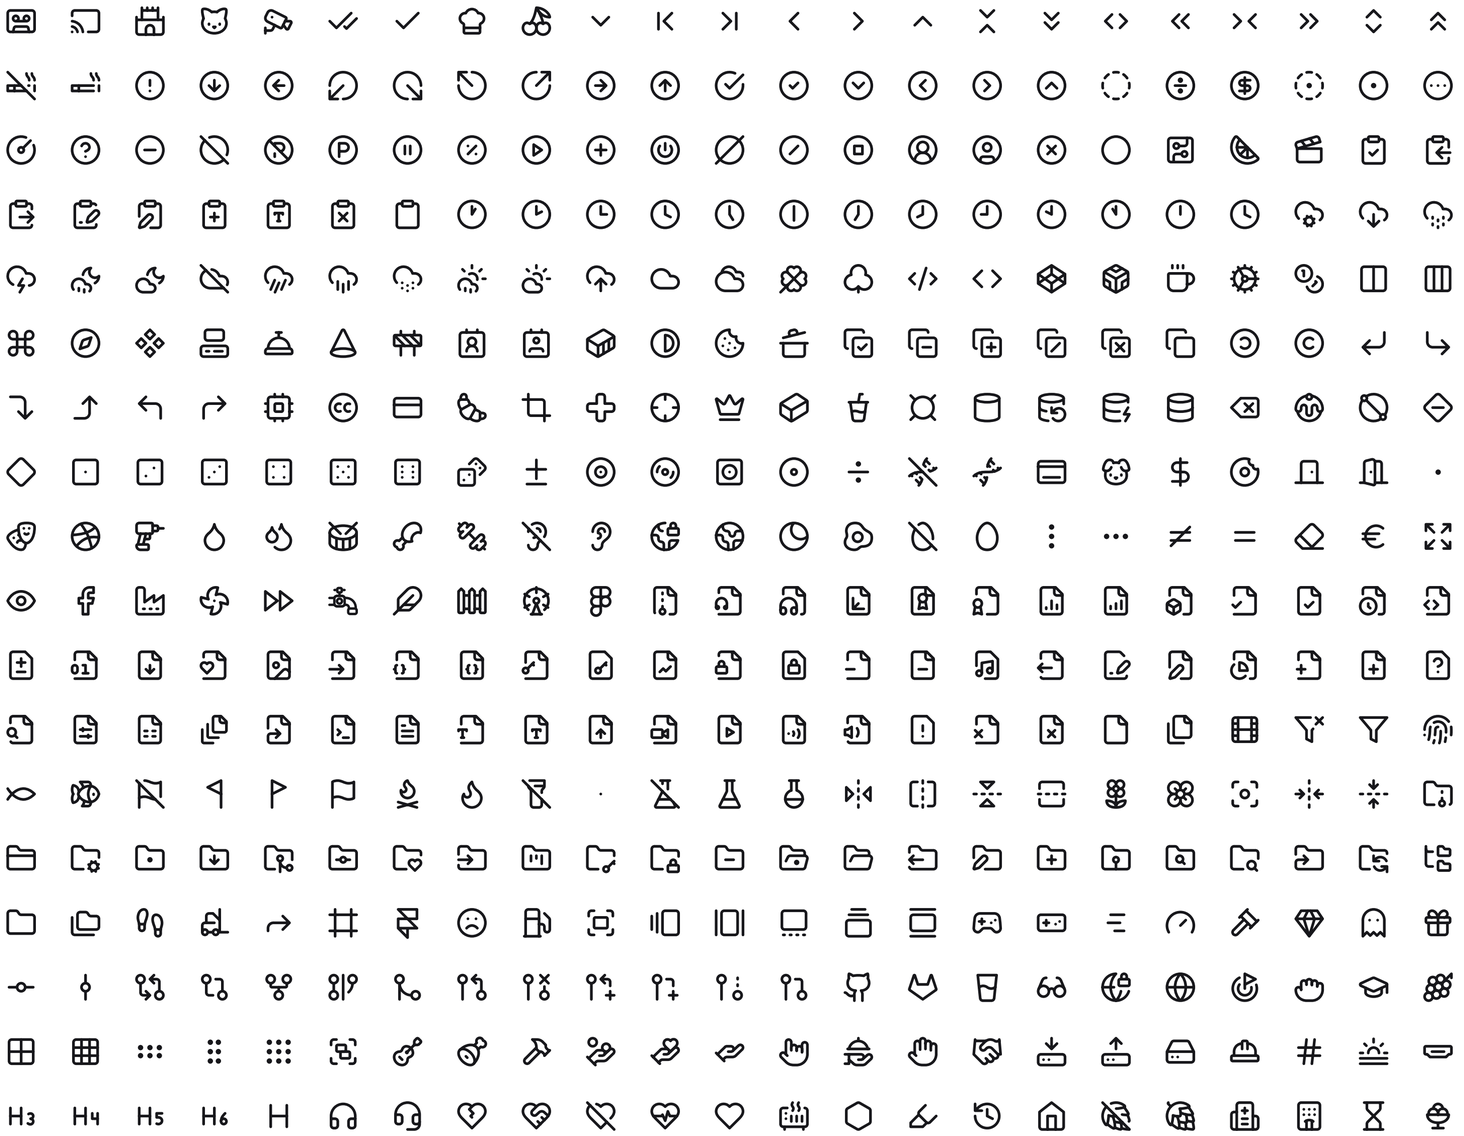


Iconography

Icon Library

Iconography

Monad uses the Shadcn/UI icon set, which is built on the open-source Lucide Icon library. Lucide provides over 1,600 clean, scalable SVG icons that ensure consistency across digital and non-digital applications.



Monad Tech Icons

For Monad-specific concepts or terms not covered by Lucide, custom icons are created to maintain brand alignment and clarity.

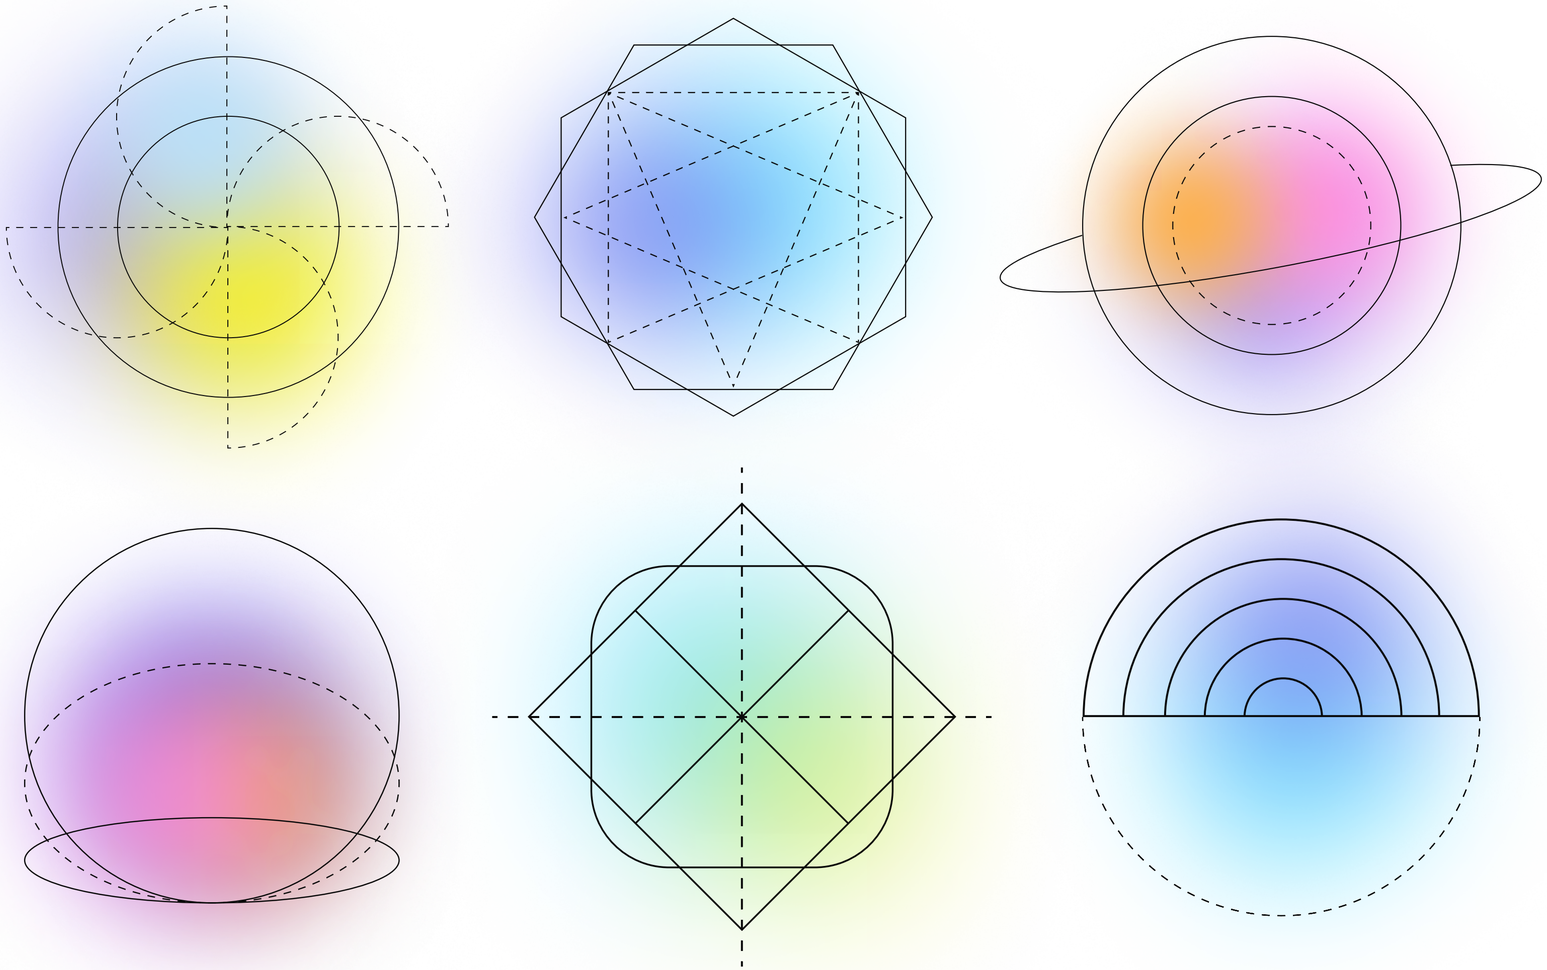
Illustrations

Illustrations

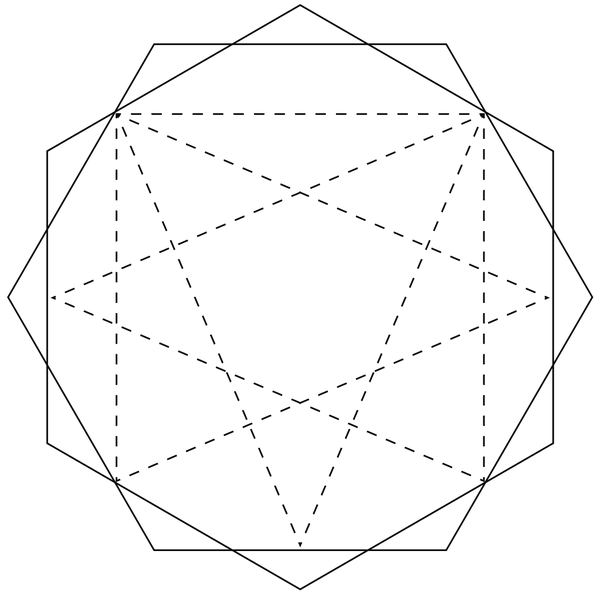
Our secondary brand illustrations are composed of monoweight geometric line drawings that combine sharp and soft corners to create visual balance.
The use of dotted lines introduces a sense of movement and dimensionality, helping to convey complexity and interconnectedness. These illustrations are best used alongside technical or abstract concepts, adding visual interest without overwhelming the surrounding design.



Illustrations

Use solid and dotted lines together to show both structure and movement. Add two or three soft, blurred color circles underneath using Monad brand colors to give a sense of depth and harmony. Keep the blurs light so the lines stay sharp and easy to see.

Use these illustrations to support complex or abstract ideas in diagrams, slides, or web pages. They bring a balance of clarity and creativity and will grow over time as new needs arise.



– SINGLE WEIGHT ILLUSTRATION
– DOTTED LINES

– BLURRED CIRCLES (2-3)
